

AI ENGINEER & FOUNDER

Nikhil Yarra.

Useful software.
Clear thinking.
One person to build with.

[Explore the portfolio](#)

From data to applied AI.

I’m Nikhil, an AI engineer building Teyrin. My background spans telecom, healthcare and financial data, then retrieval, conversational agents and multimodal AI.

I work across the interface, data workflow and software around a model - with attention to validation, fallbacks and evaluation.

EDUCATION

M.S. Data Science / NJIT

B.Tech. Computer Science & Engineering / GITAM

EXPERIENCE

Warren and Carter / Tubman / SYMNN / Phoenix Global

[Full professional profile](#)

Make the next step easier to take.

Start with the problem. Choose the software that makes sense.

01

Find the answer.

Document intelligence

Turn a document library into a searchable workspace with inspectable sources.

Documentation assistants / knowledge search / evaluation

02

Reduce the friction.

Workflow automation

Connect inputs, APIs and review steps around a practical business task.

Data preparation / integrations / validation / human review

03

Give it an interface.

Web applications

Make complex information easier to arrange, explore and act on.

Browser tools / dashboards / local document workflows

Answers with receipts.

DocAtlas / documentation intelligence

THE OPPORTUNITY

Find the answer.
Keep the source.

Search documents, inspect
passages, and request model
responses.

WHAT IT SHOWS

Retrieval comparison.
Exact-quote checks.
Evaluation gates.

Development system. A small public-document benchmark supports the retrieval comparison; it does not establish production answer accuracy.

Inspect DocAtlas

Less searching.

Mailayer

Mailbox search and answers connected to source emails.

[View Mailayer](#)

Local prototype / synthetic preview data

More control.

GlassPDF

Arrange and export PDF pages directly in the browser.

[View GlassPDF](#)

Browser application / empty workspace preview

Context before conversation.

DRAX TBS

A local tutoring prototype retrieves textbook passages before inference.

[View DRAX TBS](#)

Sample interface / inference not connected

A WIDER TECHNICAL RANGE

DaChat

CSV exploration and property prediction.

Airspace

Flight-data aggregation with Hadoop.

Computer vision

Comparative facial-emotion CNN experiments.

Security + ML

DDoS detection experiments.

Teyrin.

A software company
I'm building independently.

Solely owned by Nikhil Yarra.
Founder-led, from the first conversation through
implementation.

Company profile

ONE DIRECT POINT OF CONTACT

01 Frame the problem

Agree on the users, constraints and useful
outcome.

02 Build the right scope

Shape the interface, workflow and
integrations.

03 Review and refine

Evaluate behavior, explain boundaries and
iterate.

Your next idea. Let's make it useful.

A document workflow, a web application, or an AI system.
Tell me what needs to work better.
